Creating potting compost - The Natural Way

Now you can turn your household food waste into top quality garden potting compost, quickly, easily, cost effectively and in an environmentally friendly manner.

Using worms to compost food waste is a very successful and popular method used throughout the world. It works because it is simple. You take some worms, put them in a box and add your food scraps. The worms eat the scraps and digest the food. The end product is the very best potting compost available anywhere.

It is possible to carry out this process in any old plastic box but Finnis Organic Worms have developed a

system, **The Worm Works** which means that there is no mess, no smell, no chance of the worms escaping, and which also produces a liquid fertiliser known to gardeners as black gold!

Produce your own Black Gold

The Worm Works operates simply. There are three trays. You place some worms in the bottom tray along with some food scraps which the worms eat. Once they have finished that food they move by themselves up to the next tray into which you have put food and the first tray is now ready to use as compost. You simply keep the system going and the liquid fertilizer gathers in a chamber at the bottom where there is a tap to drain it into your watering can.

The Worm Works is constructed from high quality recycled plastic, with a limited 5 year warranty on materials and workmanship. It is very simple to assemble and can be stored inside or out.

Your questions answered

Is The Worm Works difficult to manage?

The Worm Works requires only a little effort - perhaps 15 minutes a week. It will even look after itself while you go on holiday.

Is there a smell?

As long as you are operating the bin as instructed there will be no smell.

Where do I get the worms from?

The worms you require are included in the price of **The Worm Works**, they will be sent to you directly by overnight delivery.

Where do I keep The Worms Works?

It is best to keep **The Worm Works** in a sheltered part of the garden or on a balcony. In very cold weather it can be placed in a garage or shed. Many people keep them in the kitchen.

Can the worms escape?

The Worm Works is designed to allow air to flow through it while preventing the worms from escaping.

How much compost is produced?

It really depends on the quantity of food scraps you place in **The Worm Works**. For a large family you can have additional composting trays which will produce more compost.

You will receive a 16 page illustrated booklet with **The Worm Works** which tells you everything you need to know.

You can find the answers to additional questions at www.thewormworks.com

Finnis Organic Worms is the largest worm farm in Ireland. It produces worms for the recycling industry as well as for fishing. The Worm Works composter is manufactured in the USA where it is one of the top selling systems of its type. The Worm Works has been redesigned in Co Down Northern Ireland to suit the European climate and a new lid system is manufactured in Northern Ireland.

This project has been part-financed by the European Union LEADER+ Programme and the Department of Agriculture and Rural Development
